

## MEDICAL GAS SUPPLY

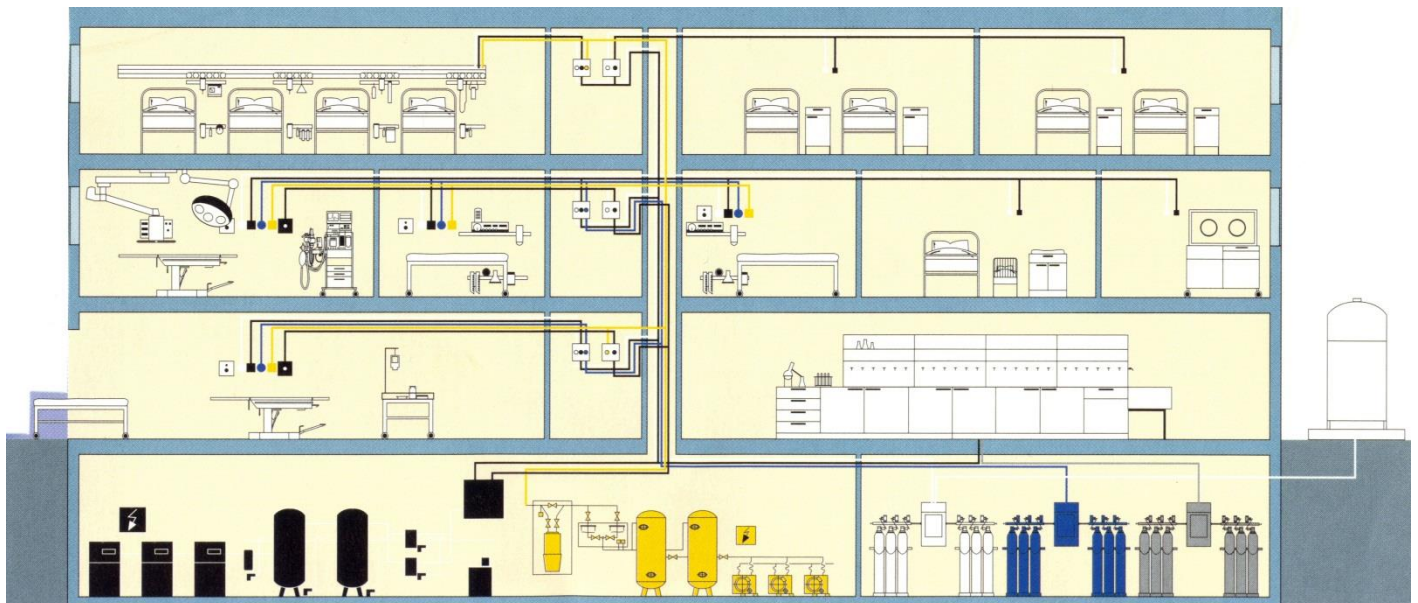

System Integration

### From Production to Customer

The centralized medical gas supply is an important part of any modern hospital. Uninterrupted provision of medical gases is the indispensable prerequisite for smooth work flow in medical care of hospitalized patients and the operating environment.

For more than 30 years Pneumatik Berlin GmbH guarantees reliable supply of medical gases with innovative technology and products. Our team of specialists has strong expertise in the field of customized overall solutions, one-stop shopping, including planning, construction, installation and maintenance.

With our high-skilled installation and service staff we are capable to focus on all aspects of medical gas engineering at our customers' regional or international sites.

## MEDICAL GAS SUPPLY

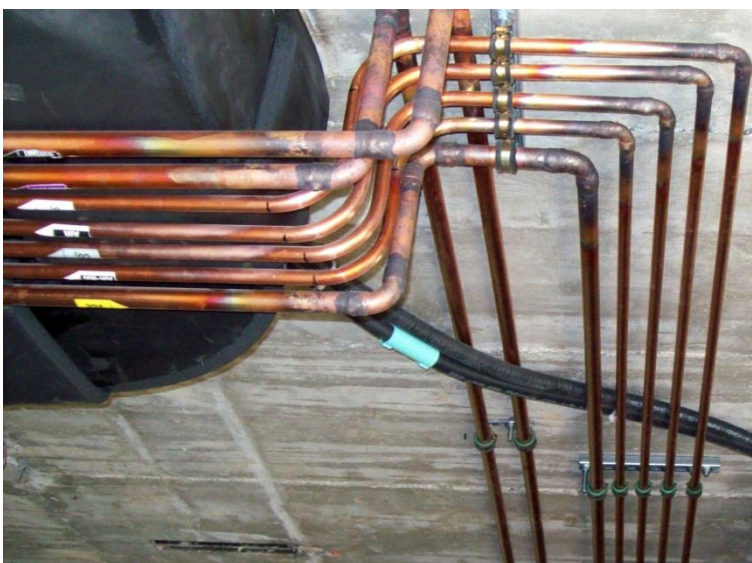

System Integration

As a certified system integrator Pneumatik Berlin is able and fully authorized to design, build and service centralized service medical gas supply systems for all clinical purposes. Existing systems will be integrated in the overall concept and a wide range of components from all relevant suppliers is available for customized solutions.

### Advantages of Centralized Medical Gas Supply Systems

- Instant availability of all gases on the terminal units
- Clean, safe and reliable delivery of gases
- Continuous flow of gases when and where required
- Minimal accident hazards due to mishandling of cylinders
- Easy and cost efficient purchase of gases in bulk quantities
- Minimized downtime risk
- Rationalization in ordering, storing and transporting a wide variety and size of gas cylinders
- Minimum damage to building due to handling of cylinders
